JOURNAL OF CRYSTAL GROWTH

www.elsevier.nl/locate/jcrysgro

Subject index

Apparatus
- for coating aerosol 290
- for controlled vapor diffusion 283

Computer simulation
- of dislocation growth 165
- of melt growth 205, 218
Convection 123, 144, 465

Dendritic growth
- of cupric chloride 423
- of gibbsite 451
- of superalloys 489
Device characterization
- quantum wells 485
- quantum wires and dots 17, 180, 199
Diffusonal control
- of boric acid 75
Dissolution
- of boric acid 75
- of zinc hydroxapatite 98

Epitaxy, see Thin film growth

Kinetics
- of growth 40, 75, 83, 115, 245, 277, 307, 444, 451, 477
- of interface control 67, 91
- of nucleation 61, 185, 277, 290, 451, 477

Lysozyme 102

Melt growth technique
- by Bridgman–Stockbarger method
- - of cadmium zinc telluride 22
- - of mercury cadmium telluride 379
- by Czochralski method
- - largasite 263
- - of lithium niobate 413
- - of silicon 123, 205, 218
- by uniaxial solidification
- - of calcium bismuth vanadate 61
- - of calcium yttrium aluminate 56
- - theory of 409

Morphological stability
- of alloys 300
- of potassium dihydrogen phosphate 83

Numbers
- Grashof 123, 144
- Rayleigh 123, 144

Quantum wells, see Device characterization
Quantum wires and dots, see Device characterization

Solution growth technique
- by hydrothermal method
- - of barium titanate 269
- - of cerium hydroxycarbonates 315
- - of zinc oxide 361
- by low temperature method
- - of zinc selenide 346
Superconductivity materials, high T_c
- - of PrBCO 385
- - of YBCO 228
Surface energy, determination
- of sucrose crystals 67
- of vaterite 277
Surface structure
- of sucrose crystals 67

Thin film growth, epitaxy
- by liquid phase epitaxy
- - of aluminum gallium arsenide 193
- - of gallium arsenide 193, 321
- - of lead tin telluride 32
- - of YBCO 228
- by metalorganic molecular beam epitaxy
- - of barium titanate 397
- by molecular beam epitaxy
- - of aluminum arsenide 335
- - of gallium arsenide 335
- - of gallium nitride 327
- - of gallium selenide 199
- - of indium arsenide 17, 199
- - of indium selenide 115
- - of magnesium oxide 434, 444

PII: S0022-0248(00)00848-4

– – of molybdenum sulfide 115
– – through pulsed laser deposition
– – – of cerium oxide 253
– – – of lanthanum tin molibdate 404
– of zinc oxide 419
– – through metalorganic chemical vapor deposition
– – – of gallium nitride 176
– – – of indium arsenide 481
– – – of indium gallium arsenide 10
– – – of lead scandium tantalate 390

Vapor growth technique
– by chemical transport
– – of indium phosphide 185
– – of palladium silicide 368
– – of zinc selenide 353
– by chemical vapor deposition
– – of silicon carbide 245
– by ion beam assisted deposition
– – of gallium nitride 1
– by evaporation and condensation
– – of titanium carbide 237
Vapor-liquid-solid growth
– of titanium carbide 485
